Stan,

Please have the monitoring crew repair/replace the sampling port on the mobile location particulate monitor. See photo. It is missing a spacer and therefore the top cap/lid is covering 1/3 of the inlet itself, biasing the results low.

Also, the location is behind a large tree and should be reconsidered.

Lastly, the packet of information pamphlets was empty and I replenished the supply from the near water location. Please have the crews check and replenish the boxes daily.

Not major items, but easily fixable.

Thank you.

Mike
